

# Morphology

Material de clase: <http://www.robotica-up.org/CV2018.zip>

## Introduction

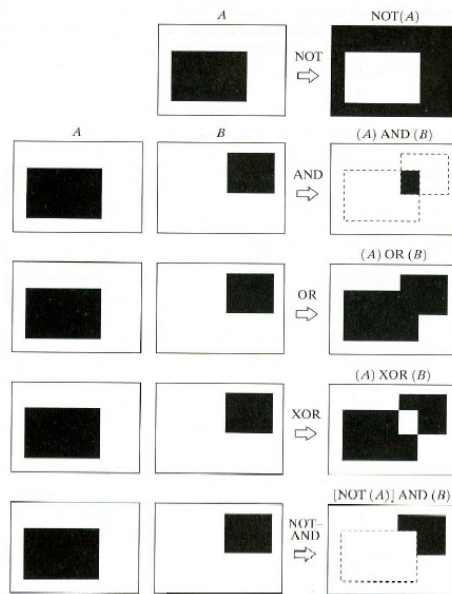

### What is morphology?

It is a tool for extracting components of an image (such as regions, contours, skeletons,...) which are useful in shape representation and description.

Morphological processing is based on the set theory.

## Set Theory - Examples

## Dilation ( $A \oplus B$ )

Grows/thickens objects in a binary image. It is based on a structuring element.

Original

```

0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0
0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0
0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0
0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0
0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0
0 0 0 0 0 1 1 1 1 1 1 0 0 0 0 0
0 0 0 0 0 1 1 1 1 1 1 0 0 0 0 0
0 0 0 0 0 1 1 1 1 1 1 0 0 0 0 0
0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0
0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0
0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0
0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0
0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0
0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0
0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0

```

Structuring element

```

      1
     1
    1
   1
  1
 1

```

The structuring element translated to these locations does not overlap any 1-valued pixels in the original image.

Dilation process

When the origin is translated to the "•" locations, the structuring element overlaps 1-valued pixels in the original image.

Final

0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0
0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0
0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0
0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0
0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0
0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0

```

## Opening and closing

**Opening:** Removes completely regions of an object that cannot contain the structuring element, smooths object contours, breaks thin connections and removes thin protrusions

$$A \circ B = (A \ominus B) \oplus B$$

**Closing:** Also tends to smooth object contours. Joins narrow breaks and fills holes smaller than the structuring element.

$$A \bullet B = (A \oplus B) \ominus B$$

### Geometric interpretation

## Hit-or-Miss Transformation ( $A \otimes B$ )

Objective: To detect pixel configurations in an image upon the use of the background information.

$$A \otimes B = (A \ominus B_1) \cap (A^c \ominus B_2)$$

The final image consists of all locations that match the pixels in B<sub>1</sub> (a "hit") and none of the pixels in B<sub>2</sub> (a "miss")

## Morphological Algorithms

Border extraction

$$\beta(A) = A - (A \ominus B)$$

Region filling

$$X_k = (X_{k-1} \oplus B) \cap A^c \quad k = 1, 2, 3, \dots$$

A: imagen to be filled (M,N)

B: structuring element

$X_k$ : image (M,N) of "0" with a starting point "1"

**The algorithm ends at interaction  $k$  if  $X_k = X_{k-1}$**

Skeletons

## Morphological Algorithms – Connected Elements

4-A

1	1	1	0	0	0	0	0
1	1	1	0	1	1	0	0
1	1	1	0	1	1	0	0
1	1	1	0	0	0	1	0
1	1	1	0	0	0	1	0
1	1	1	0	0	0	1	0

1	1	1	0	0	0	2	0
1	1	1	0	0	0	2	0
1	1	1	0	0	2	0	0
1	1	1	0	0	0	0	0

Labeling

Objective: Object detection

$$[L, num] = bwlabel(f, conn)$$

f – Input binary image

Conn – desired connectivity  
(default 8)

L – Label matrix

Num – total number of connected  
elements

## Morphological Algorithms –Morphological Reconstruction

Repeated Dilations of Marker Image, Constrained by Mask

Morphological reconstruction is based on an erosion with the following properties:

- It requires 2 images and one structuring element (instead of one image and one structuring element)
- Image 1 (f) is the *marker* (the starting point of the transformation)
- Image 2 (g) is the *mask* (the original image, the end of the transformation)

## Morphological Algorithms –Morphological Reconstruction

*Mask (original image)*

```
A = [10 10 10 10 10 10 10 10 10 10;
      10 14 14 14 10 10 11 10 11 10;
      10 14 14 14 10 10 10 11 10 10;
      10 14 14 14 10 10 11 10 11 10;
      10 10 10 10 10 10 10 10 10 10;
      10 11 10 10 10 10 18 18 18 10;
      10 10 10 11 10 10 18 18 18 10;
      10 10 11 10 10 10 18 18 18 10;
      10 11 10 11 10 10 10 10 10 10;
      10 10 10 10 10 10 11 10 10 10];
```

**recon = imreconstruct(marker, mask)**

(Reconstructs an image by eliminating all fluctuations and keeping the desired information.

```
recon =
10 10 10 10 10 10 10 10 10 10
10 12 12 12 10 10 10 10 10 10
10 12 12 12 10 10 10 10 10 10
10 12 12 12 10 10 10 10 10 10
10 10 10 10 10 10 10 10 10 10
10 10 10 10 10 16 16 16 10 10
10 10 10 10 10 16 16 16 10 10
10 10 10 10 10 16 16 16 10 10
10 10 10 10 10 10 10 10 10 10
10 10 10 10 10 10 10 10 10 10
```

**Marker (Mask  $\ominus$  Structuring element)**  
(Highlights the desired locations)

```
marker =
8 8 8 8 8 8 8 8 8 8
8 12 12 12 8 8 8 9 8 8
8 12 12 12 8 8 8 9 8 8
8 12 12 12 8 8 8 9 8 8
8 8 8 8 8 8 8 8 8 8
8 9 8 8 8 16 16 16 8 8
8 8 8 9 8 16 16 16 8 8
8 8 9 8 8 16 16 16 8 8
8 9 8 9 8 8 8 8 8 8
8 8 8 8 8 8 9 8 8 8
```

**Filling holes**

**B=imfill(A,'holes')**

**Remove objects at borders**

**B=imclearborder(A,conn)**

## Morphology in gray-level Images

Dilation  
 Erosion  
 Opening  
 Closing

} Same as binary

Morphological Gradient (change of gray-level in an image)

$$A \oplus B - A \ominus B$$

Top-hat transformation: Background equalization

$$h = f - (f \circ b)$$

Reconstruction: Better binarize the image first and work in binary

## Binarization by Threshold Selection
